

Staple Gun Accessory for Attaching Tab

Abstract of the Disclosure

The invention comprises a staple gun with highly compact accessory apparatus for attaching a planar tab or label to a fixing surface. The accessory has a housing and a positioning and indexing assembly associated with the housing which is operable to feed and hold a tab or label between the staple gun head and fixing surface, thereby allowing single-handed fixing of a label or tab to a fixing surface. The apparatus can include a roller assembly, staple gun and accessory apparatus or have all components integrated into the construction of a staple gun apparatus. Preferably, the apparatus is mated with a tab or label holding magazine. Some exemplary embodiments of the invention are suitable for securing protective covering to lumber product and may be configured for rectangular polyolefin tabs measuring approximately 0.035 inch thick and 1.0 inches by 2.0 inches.
